

K.OneX S/CEP

Körber Add-on for SAP Solutions

For SAP applications - the CEP Cockpit is fully integrated into the SAP system for shipment processing.

As an add-on, the K.OneX S/CEP for SAP applications supports shipment processing for the most diverse CEP service providers (courier, express and parcel services). It is directly integrated into the SAP system, meaning it is not an interface to an external shipping system and additional hardware is not required. All standard SAP functions can be used. The system is easier to use since one works continuously in SAP and it has a uniform look and feel.

Along with the advantages of a technical integration, the benefits lie in project execution and later operation management. The user receives all development and project services from one source. Körber is the single point of contact for support issues regardless of whether they are related to a warehouse management or a shipment system.

K.OneX S/CEP - Benefits at a Glance

- **K.OneX S/CEP can be fully integrated into your SAP system**
- **All structures such as user management, document control and process control are used together**
- **Integration into existing SAP logistics processes**
- **Use of SAP standard functions such as multilingual capable, multi-warehouse capability and configurable number ranges**
- **Data updates**
- **Routing data can be updated and version-controlled with the click of a button**
- **The Körber support team ensures the actuality of routes and layouts of the used shipping service providers with a valid software maintenance contract**
- **Master data maintenance in SAP**
- **Control via a central cockpit for all shipping service providers**
- **Well organized and easily understandable license model**
- **Support by the Körber support team**

Among the basic functions are routing management and the management of shipping provider masterdata, determination of a shipping provider, shipment processing with shipping label printing and the creation and transfer of the daily closing via EDI. With the integration of the CEP cockpit in the SAP environment, you have a smooth shipment processing. Through the reduction of interfaces and the use of a common database, error sources can be avoided and the performance of the system increased.

K.OneX S/CEP – Functions

- Determination of the service provider and shipping route
 - The shipping service provider and shipping route are determined based on the data of the SD delivery or SD transport (shipping point, route, shipping type, shipping requirement, incoterms, etc.) as well as the configuration in K.OneX S/CEP
- Label printing specific to the shipping service provider:
 - The routing code determination is specific to the shipping service provider
 - Standard layouts
 - Individual layouts
- Creation of daily closings:
 - Electronic (interface)
 - Optional: printing of a list
- Event-controlled printing
- Interfaces to the shipping service providers
- Comprehensive statistics functions
- Tracking & tracing function
