

K.OneX S/DGM

Körber Add-on for SAP Solutions

Dangerous Goods Management. For more security in the warehouse and during transport.

The storage and transport of dangerous materials demands high security standards. This is reflected in the many regulations and laws that need to be adhered to. In addition, master data relating to security and regulations requires maintenance and frequent updates. Goods Receiving and Goods Issue processes need to be completed in order to meet security requirements. Arising from administrative permits or the VCI combined storage matrix for dangerous substances, store-in strategies need to take combined storage prohibitions and quantity restrictions into account. During store-out at the latest, dangerous goods regulations require the attachment of compulsory labels and the printing of necessary transport and accompanying documents in the specified languages. Of course, adherence to packaging and combined loading regulations must be checked.

K.OneX S/DGM - Benefits at a Glance

- **Streamlined, effective solution**
- **Inexpensive and user-friendly**
- **Ergonomic control with homogeneous look and feel**
- **Display of pictograms**
- **Sophisticated authorization concept**
- **Full integration into SAP systems**
- **Content can be supplied upon request**

K.OneX S/DGM (SAP-based Körber add-on Dangerous Goods Management) offers an effective, streamlined and user-friendly solution for your dangerous goods and substances management.

K.OneX S/DGM - Functions

- Management and maintenance of specific master data for dangerous substances and goods
