

A smarter **WMS** for modern operations

STEPLogic Warehouse is an app-based warehouse management system designed for small and mid-sized businesses to personalize their warehouse—but don't need the complexity or cost of a Tier 1 WMS.

Built on the STEPLogic low-code platform, this solution gives you full control over your warehouse operations, from receiving to shipping—with the power to adapt instantly as your needs evolve.

Why STEPLogic Warehouse?

- Go live in weeks—not months.
- Add new processes without waiting on software vendors.
- Integrate with upstream and downstream systems using open APIs.
- Empower your team with a system that works the way they do.

STEPLogic Warehouse puts you in control.

Key features

App-based flexibility

Deploy only the WMS functionality you need and add new features on demand.

Low-code personalization

Tailor screens, reports, RF messages, and workflows without expensive development or IT support.

Mobile and RF ready

Run the WMS from handhelds, tablets, or desktops—anywhere in your operation.

Real-time visibility

Every transaction is logged for audit, error correction, and process improvement.

Cloud or on-prem deployment

Choose the model that fits your IT and budget needs..
